## Your storage solution

Experiencing problems due to lack of storage space? We hold the solution. Rent a PISTELLI air supported structure. Thus you may increase your storage area, quickly, without charging your budget with construction works or dealing with bureaucracy for design and building approval.

Installation takes a mere two days. We have in stock, ready for delivery 300 3,000 m2 air supported structures.

If you need to increase the area, you can do it quickly and easily, as well as changing locations. Solve your lack of storage space problem once and for all. No one likes to see his profits going down the drain.

## Short delivery periods

PISTELLI guarantees the installation of pavilion ready for delivery in little more than 24 hours, without the need of prior site inspections in order to know the area. This period may increase to five days in the event of custom projects.

## State of the art technology

PISTELLI air supported structures are made of a high resistance polyester fabric coated with flame retardancy, self-extinguishing, UV resistant PVC. The finishing of the cover is lacquered, made by high frequency and/or hot air electronic welding thus guaranteeing high resistance.

They are made of an elliptic membrane and fixed on the soil through metallic stakes and anchor bolts.

The access to the pavilion is made through a sass with sliding doors to admit stackers or trucks.

With the PISTELLI air supported structure you may increase the storage area of your company for any product, or you may transform it into a space to host special events, without the need to invest in the acquisition or the building of new installations. Furthermore, the PISTELLI air supported structure may be rented for short or long periods, whichever is the most convenient. It is particularly well adapted to be used as an annex to industrial plants for the storage of raw materials, packaging material and/or finished products.
